THE LIST OF "THE WORLD'S 20 MOST EXTRAORDINARY ENGINEERS"

One of the world's leading engineering departments in Germany and the Netherlands and for the retired migrants from Italy and Turkey living in these countries received a grant from the European Commission within the scope of the Horizon 2020 program. The project, titled "MiReKoç: A Dynamic Hub for Scholarly Research on Migration," aims to generate knowledge to foster or impede intergovernmental return migration and develop policies and programs that benefit migrants.

MiReKoç's project "MIG-AGE" has become a well-known global hub for research on migration and development. The project is part of an international network of researchers and organizations that work on migration-related issues. The network includes universities, research institutions, and governments from around the world. The project's research focuses on the role of migration in development and the impact of migration policies on the economy.

The project has received funding from the European Commission and other organizations. The project's goals include generating knowledge to foster or impede intergovernmental return migration and developing policies and programs that benefit migrants. The project's research focuses on the role of migration in development and the impact of migration policies on the economy.
